

Iteration1 - Feedback for code

Team name: **TEAM LAMA**

Instructor's feedback:

"Model: User model just include the basic user attributes. The faculty and student specific attributes are not included. Doesn't include a model for ""research positions. "" Copied the ""Post"" and ""Tag"" models from SmileApp but no changes were made on them .

Use cases: User registration requires to enter the basic user information only. There are student or faculty specific information that need to be entered during registration. Implemented generic login; there is no difference between student and flask login. "

TA demo notes:

Working features (showed during the demo)	Frontend and Backend-Integrated:	Login and registration, can create research position post. Student users cannot login yet as they have different user/faculty type pages
	Frontend only:	
	Backend only:	
Untested and/or non-working code	Frontend only:	
	Backend only:	Student details and faculty details in models.
