Iteration2 Features	
(Faculty) Login and register	<p>Yes - There is almost no difference between faculty and student profiles. The registration and edit profile forms for faculty and student display pretty much the same fields.</p> <ul style="list-style-type: none">• Faculty should not choose programming languages• Students should be able to also choose research fields and elective courses.• You don't have data validators in the form for inputs that need to be unique in the database (email, username, etc.) The code fails (gives runtime error) if an email that already exists is entered.
(Student) Login and register	See the comments above
Restrict the access to content pages when the user is not logged in?	Yes
Restrict the access to faculty pages /routes when for student users?	No
(Faculty) Create research positions	<p>The link in the navigation bar fails. Had to change the code to fix it.</p> <p>Research fields are entered as text.</p> <p>In iteration3, you will identify the research positions that match the student interests and recommend them to the student. In order to implement this, you need to have a predefined list of research fields stored in the database and you should associate the students and the positions with these fields through a many-to-many relationship. And in the "create position form", you can have the user select from the predefined list of research fields.</p> <p>You already do this for programming languages selections of students.</p>
(Faculty) View the list of the students who applied for their positions	No
(Student) View the open research positions. The information of the position	Yes

(title, description, start/end dates, etc.) should be displayed.	
(Student) Apply for research positions.	Yes
Overall design of the application	Ok
Is the application easy to use? Are the forms easy to fill in?	Some inputs are entered as text (start/end dates, research fields, etc.). Those can be entered through select or checkboxes. See my comments above.
Additional Features	
(Faculty) View the qualifications of each applicant	No
(Student/Faculty) Edit profile	Yes - No difference between student and faculty edit profile.
Instructor's comments:	See my comments above. Otherwise well done!
TA Comments (demo):	Can edit their profile information - student + faculty - can apply for positions as student - can create new positions as faculty Few errors w/ positions - using current username instead of faculty name
Iteration2 Score (code only)	87
